Memorandum

To: Operations Leadership Team
From: IT Operations
Date: 3 July 2026
Subject: Q2 internal review

Here is the usual end of quarter rundown from IT Operations. Things were steady this quarter. Availability came in at 99.2 percent against a target of 99.0, and the ticket queue stayed flat. Average resolution time was 7.6 hours.

Infrastructure

There were no unplanned outages at the main data centre. Two scheduled maintenance windows went ahead without problems. Backups completed at 97 percent. Storage is sitting at about 72 percent, which is comfortable for now but worth watching. The legacy file share migration is roughly 45 percent done and on schedule.

Access

The quarterly access audit turned up 9 dormant accounts, all now disabled. MFA covers 86 percent of staff accounts. The gaps are mostly shared service accounts, which we plan to deal with over the next two quarters. Contractor accounts are reviewed once a quarter.

Contractors and vendors

Contractor numbers were unchanged from last quarter and no new engagements were started. Separately, the support contract for the backup software was renewed for another year at the same price.

Projects

The customer portal refresh is in build and on track for user testing in Q3. A new monitoring project is in early scoping, with a design phase expected to start next quarter.

Next steps

Continue the file share migration. Extend MFA to the remaining service accounts. Begin design work on the monitoring project once scoping is signed off.

Figures are provisional until finance closes the quarter.
